PROFESSIONAL SUMMARY

Cloud Engineer fresher (B.E. CSE, 2026) with hands-on experience in AWS EC2, S3, IAM, and VPC, Linux commands and file permissions, and CCNA networking concepts including subnetting, VLANs, and routing. Built a Python server monitoring tool and a data analysis project. Familiar with Git, Docker, and Jenkins basics. Seeking an entry-level AWS or Cloud Engineer role.

TECHNICAL SKILLS

Networking:	CCNA fundamentals, TCP/IP, IPv4 Subnetting, DNS, DHCP, NAT, VLAN, Trunking, Inter-VLAN Routing, Static Routing, OSPF, ACL
AWS:	EC2, IAM, S3, VPC, Subnets, Security Groups
DevOps:	Git, GitHub, Docker, Jenkins, CI/CD basics | *Learning:* Kubernetes, Terraform
Linux:	File and directory management, permissions, process management, package management, SSH, shell scripting basics
Python:	Data Types, Operators, Conditional Statements, Loops, Functions, Collections, OOP, File Handling
Tools:	AWS Management Console, Cisco Packet Tracer, VS Code

PROFESSIONAL EXPERIENCE

Cloud Engineer Intern – BDreamz Global Solution Private Limited, Chennai

- Supported AWS resource setup and configuration, including EC2, S3, IAM, and VPC.
- Performed basic Linux tasks, including file management, permissions, and troubleshooting.
- Assisted with DevOps tasks using Git/GitHub, Docker, and Jenkins under guidance.
- Applied CCNA networking concepts and basic Python scripting to support cloud tasks.

PROJECTS

AWS Linux Server Monitoring and Automated Alert System
Tools: Python, Linux, AWS, Git, GitHub, psutil, Logging
Description: Developed a server monitoring application to monitor system health metrics such as CPU, memory, disk, and network usage, with configurable thresholds and logging.
Key Responsibilities:

- Developed a Python-based monitoring application using psutil to collect CPU, memory, disk, and network utilization metrics.
- Implemented configurable resource thresholds to identify abnormal server conditions and generate HEALTHY/WARNING status messages.
- Implemented logging to maintain monitoring activity and warning information for troubleshooting and analysis.
- Used Git and GitHub for source-code management, version control, and project documentation.
- Built for deployment on an AWS Linux EC2 instance; CloudWatch monitoring and automated alerts are the next planned step.

Tamil Movie Rating Analysis System
Tools: Python, NumPy, Pandas, Matplotlib, OOP, CSV
Description: Built a menu-based Python application to analyze Tamil movie ratings, genres, release years, and review counts.
Key Responsibilities:

- Calculated average, median, maximum, minimum, and standard deviation of ratings using NumPy.
- Used Pandas to find highest- and lowest-rated movies, genre-wise ratings, and movies released per year, with search and minimum-rating filters.
- Organized the code with OOP into separate modules and created charts for rating distribution, genre comparison, and yearly releases using Matplotlib.
